

Classic Valve & Carburettor Cleaner

Bardahl Classic Valve & Carburettor Cleaner has been developed to prevent and solve many problems that occur with carburettor engines. This gasoline cleaner ensures that the nozzle, float etc are cleaned and builds up a protective lubricating film.

As a result, the float seals well and ensures that the nozzle can open sufficiently and does not get stuck due to gum formation of unleaded petrol. Now the throttle response is better and smoother. Regular use of this gasoline cleaner ensures that the carburetor stays clean and does not dry out.

Properties

- ✓ Cleans and removes deposits from the carburetor
- ✓ Restores power, throttle response and acceleration
- ✓ Improves engine starting
- ✓ Reduces black exhaust smoke
- ✓ Reduces fuel consumption
- ✓ Ensures nice idle running of the engine

Instructions for use

1 can is enough for 60 liters of petrol. If the engine does not run properly, it is advisable to add 1 can to 20 liters of petrol. If the carburetor cleaner is in the tank, empty the tank as much as possible.

Suitable for every petrol and catalytic converter. Does not affect plastic or rubber gaskets.

Not suitable for E85 bio petrol.
